

Meet Emma,

22, living in Toronto.

"Is this Eco-friendly?"

She scrolls through her favorite online store or browses items in her local boutique and wonders: She doesn't know the jacket's carbon footprint, recyclability, lifespan, or micro-fiber impact, and the brand doesn't provide clear data.

The Journey of a T-Shirt: From Fabric to Footprint

1.3 million tonnes

- 85 to 98% of it ends up in landfills.
- 5th-largest category of plastic waste sent to landfills in Canada
- Canadians on average throw away about 37 kg of textiles per person each year

Canada, the fashion and lifestyle industry generates over 1.3 million tonnes of textile and product waste every year

44-45%

*are willing to pay more and
buy second-hand items.*

Gen Z shoppers like Emma care deeply. Yet, without easy, trustworthy tools to measure environmental impact, their choices often default to fast fashion, reinforcing wasteful practices."

*Green-first, circular-
economy models,*

Companies receive little pressure to adopt

Currently, there is no known optimal way for consumers to assess a product's carbon footprint, recyclability, lifespan, or micro-fibre impact. Existing information remains fragmented or overly technical.

Problem

Gen Z Canadians lack an easy way to see the real environmental impact of their fashion and lifestyle purchases; our AI-powered solution gives them instant product- and brand-level scores, tracks their cumulative eco-impact, and recommends lower-waste alternatives, empowering smarter choices that drive a circular economy.

Solution

revogue

A real-time, mobile-first app that helps Gen Z shop smarter and greener, simply. Scanning or browsing, users instantly see a product's impact, get sustainable alternatives, and track their eco-savings over time. Color-coded scores, and actionable tips turn conscious shopping into effortless, everyday impact.

Key Metrics

KPI	Explanation	Canadian Benchmark / Reference Value
End-of-life diversion rate (%)	% of the product expected to be reused or recycled rather than landfilled.	~15% diverted / 85% landfilled — Only a small portion of textiles are reused or recycled in Canada. (canada.ca)
Material intensity (kg per item)	The weight of <u>fibres</u> /materials per product, influencing total waste generation.	0.5–1.2 kg/item (avg clothing) — typical range for garments sold in Canada; contributes to ~1.3 million <u>tonnes</u> textile flow annually. (nactr.ca)
Product lifespan (years of use)	Average usable life before disposal; longer life = lower waste.	2–3 years average use before discard; fast fashion reduces this below 2 years for ~40% of items. (innovatingcanada.ca)
Fiber type recyclability score	Ease of recycling based on <u>fibre</u> composition and local infrastructure.	Low (~20–30%) recyclability — most apparel uses blended <u>fibres</u> difficult to process in Canada. (canada.ca)
Micro- <u>fibre</u> shedding potential (kg or count per wash/use)	Estimated microplastic or <u>fibre</u> loss during use or laundering.	~700,000 <u>fibres</u> per wash (synthetics) — typical release rate; contributes to microplastic load in waterways. (ec.gc.ca)

UX, Design & Accessibility

5xl impact numbers, animated micro-interactions shimmer effects, glowing badges, improved contrast with emerald-600/teal-500 gradients WCAG AA standards, and expanded touch targets (56-64px for primary buttons). Focus-visible ring states, smooth Motion animations for engagement, and the bottom navigation includes a sliding active indicator with spring physics.

Prototype

DEMO

Proof of concept (POC)

Empowering Emma,

Her everyday choices could add up to real, measurable impact, influencing companies to adopt sustainable practices, improve transparency, and prioritize circular processes.

Instantly shows impact scores for products and brands,

Tracks her cumulative eco-impact over time, and

Suggests lower-waste alternatives, resale, rentals, or repair options.

FAQ'S

Business Model & Revenue Stream

Freemium app with paid pro features, affiliate commissions on eco-products, and B2B sustainability insights for fashion brands.

Future Data Sources:

Will integrate retailer APIs, EPR registries, and user-generated product scans to build a proprietary circular fashion intelligence dataset.

AI Concept:

AI analyzes product tags and materials to generate real-time sustainability scores and personalized greener product recommendations.

User Attraction & Retention:

Real-time eco-insights turn sustainability into a rewarding, social daily habit. Gamified impact tracking, streaks, badges,

Current Data Sources:

Uses verified Canadian open-source datasets from NACTR, Canada.ca, and Environment & Climate Change Canada for benchmark KPIs.

Future Growth Strategy:

Expand via brand partnerships, embedded retail integrations, and AI-driven dashboards powering Canada's transition to circular fashion economy.

thank you!
